Additional Product Information

This component is part of the CMS (Circuit Monitoring Systems) family. CMS components are made to measure the final circuits (branches) of installations. Each monitoring system consists of a Control Unit and sensors with different measurement ranges and mounting possibilities. To create a bus connection between the Control Unit and the sensors, there are no any additional tools needed. The insulation displacement connectors can be connected by applying a small amount of pressure to the flat cable. Quick, easy and reliable.
