High performance fan heater with a 550 watt heating capacity, and integrated thermostat

The large amount of heat generated by the optimised sized heater is distributed within the enclosure using forced air, produced by the heater's fan

Customers save installation time as the thermostat is integrated into the fan heater and therefore does not need to be connected

When installed, water condensation will be avoided especially in situations when the ambient temperature dramatically drops

As the air will be distributed by the integrated fan, hot spots within the enclosure will be prevented

Customer's labour costs are reduced due to not having to install a separate thermostat, which also saves vital space inside the enclosure

Voltage (V): 220-240 V AC, 50/60 Hz
