The series RD-125 are fuent power for industrial applications or information technology in a compact size and high reliability by using electrolytic capacitors of 105°C. Can withstand input voltages of 300Vca for 5 seconds.

These sources need to have always the minimum load shown for each output. If we don't have those minimum loads the output will be unstable or the source may not come to light. You can connect a load resistance to ensure that you always have the minimum load.

Check that all the outputs do not exceed the maximum output of the power supply.
