Additional Product Information

Features1, 2 or 4-axis point-to-point positioning controller with pulse train output

The NC motion controllers support positioning control via pulse-train outputs. Positioning is performed using trapezoidal or S-curve acceleration and deceleration. Ideal for controlling simple positioning in stepper motors and servos with pulse-train input.

Positioning can be done by direct ladder commands

Position and speed control

Linear interpolation

Interrupt feeding function

Positioning of 100 points done from memory

Positioning data is saved in internal flash memory, eliminating the need to maintain a backup battery.
