

INDUSTRIAL COMPONENT DATA

CS1W-SCB21-V1 CS1W0381E CS1WSCB21V1,1 OMRON Card 2 RS232C

Brand: OMRON | Manufacturer Part Number: CS1W-SCB21-V1

Manufacturer	OMRON
MPN / Reference	CS1W-SCB21-V1
Catalog number	CS1WSCB21V1.1
Category	PLC communication module
Minimum order	1 Pcs
Document ID	EO-507C7D3437
Generated	2026-07-27

Product Overview

Card 2 RS232C

Serial communications board, 2 x RS-232C ports, supports protocol macro backup from memory card

STRUCTURED PRODUCT DATA

Technical Specifications

No structured technical attributes are currently available. Submit an RFQ for technical review.

Classification & Catalog Path

Catalog path **OMRON > Control Systems > CS1**

Additional Product Information

FeaturesThe dual-redundant PLC system for never-fail control

CS1D adds a number of dual-redundancy options to the well-proven CS1 architecture to ensure around-the-clock operation without minimal downtime. Duplex CPUs, with or without loop control functions, are continuously cross-checked for errors, without the need for special programs to be written by the user. An even simpler way to increase system availability is to use dual power supply units. Hot swapping of CPUs, power supplies and I/O units allow system maintenance with little or no process interruption.

Choose the level of redundancy needed; CPU, power supply, communication

No special programming or software tools required

Hot-swapping of I/O units

All standard CS1 I/O units can be mounted

Ideal for control of power generators, water supply utilities, 24/7 production.
