Additional Product Information

FeaturesArea monitoring fiber sensor heads

The area monitoring fibers allow the detection of objects passing anywhere through the detection range and can be used for height comparisons of different objects.

Area monitoring up to 70 mm height

Multi-beam sensor with 4 separate heads for flexible detection points

Standard or high flex fibers

Two state detections

The two outputs of the E3X-DA-S can be used to detect two different light levels.

Position compensation

In combination with the twin output function of the E3X-DA-S amplifier, the diffuse reflective area monitoring fibers can detect very small objects (e.g. needles) and a second state (e.g cover present). The area beam compensates for position variations at high speed.
