Additional Product Information

CJ-Series CPU units Modular PLC

Fast and powerful CPUs for any task

The family of CJ2 CPUs range from very small CPUs for simple sequence control to powerful and fast models that offer total machine control which can handle up to 2,560 I/O points. This enables you to modularize or 'slice' your machine into logical sections without changing PLC series. All CPU units support IEC61131-3 Structured text, Sequential Function Charts and ladder language. Omron's extensive function block library helps to reduce your programming effort, while you can create your own function blocks to suit your specific needs. All CJ2M CPU units can be equipped with pulse I/O option modules to perform position control for up to 4 axes, using dedicated instructions.
