Additional Product Information

CJ-Series motion/positioncontrol unitsModular PLC

Add motion control to any CJ-SeriesPLC

From simple position measurement to multi-axis synchronised motion control, the CJ- Series offers a full range of units:

- Counter units gather position information from SSI- or incremental encoders. Actual positions are compared with internally stored targetvalues.
- CJ2M CPU Units have dedicated positioning functions that can be used by installing up to 2 Pulse I/O option modules.
- Position Control units are used for point-to-pointpositioning with servo drives or stepper motors. Target data and acceleration/decelerationcurves can be adjusted on-the-fly.
- Position- and Motion Control units equipped with EtherCAT or MECHATROLINK-II interface can control multiple drives through a single high-speed link. Message routing through multiple communication layers allows the attached drives to be configured from any point in the control network.
