Catalog path	PHOENIX CONTACT > Field Device Connectors (FDC)

Additional Product Information

Test pin for SUNCLIX device plug, to check correct positioning of contacts
Product Description
The test pin is used to test whether the metal contacts of the SUNCLIX device plug are positioned correctly for user assembly. As such, the test pin has two different pins that are each suited to pin or socket contacts. The test pin is pushed into the plug housing until it reaches the end and indicates whether the metal contact has been correctly assembled by means of a status window.
